Please note that there are many more tests options available that are not on this page. The packages below are comprised of the most common tests requested. The following tests and packages are not intended to satisfy regulatory standards. Please call for further information and options.

WATER ANALYSIS OPTIONS	STANDARD	RUSH	
	2 Weeks	1 Week	3 Days
BASIC RESIDENTIAL PACKAGE Bacteria - Total Coliform / E. Coli (quantitative), Arsenic, Nitrate, Silica, PH, Conductivity, Iron, Manganese, & Hardness. These are the most common contaminants and nuisance minerals found in the region.	\$185	\$230	\$275
RESIDENTIAL + IRRIGATION PACKAGE Bacteria - Total Coliform / E. Coli (quantitative), Arsenic, Nitrate, Silica, PH, Iron, Manganese, Hardness (Calcium & Magnesium), Conductivity, Boron, Alkalinity (Carbonate & BiCarbonate), Chloride, Sulfate, Zinc, Sodium, Sodium Absorption Ratio (SAR).	\$395	\$490	\$590

FURTHER CONTAMINANT TESTING:

LEAD If the plumbing dates prior to 1986, leaded piping or solder may have been used.	\$50	\$60	\$75
VOLATILE ORGANIC COMPOUNDS (VOCs) This panel tests many types of toxic wastes relating to industry or improper disposal of chemicals, such as from leaking underground fuel tanks. VOC groundwater contamination is more common near city and industry and less common in rural areas. A great resource for locating contaminated areas is http://geotracker.waterboards.ca.gov/	\$160	\$200	\$240
